PDF Link	Complications post-mesh implant? (Yes/No)	State Complications and treatment	PDF Link	Date of explant	Condition of patient post mesh-explant	PDF Link	Date of Last Available record	Condition of patient as per last available record
							24/2/YYYY	She is voiding well, feels like she voids to completion, and is totally continent.
							25/4/YYYY	No evidence of cystocele. No stress urinary incontinence. Normal bladder compliance.
	Yes	Recurrent mesh erosion Cystoscopy- Urethral diverticulum					10/1/YYYY	The patient had SPARC sling procedure which she states is very effective in helping with her stress urinary incontinence. This worked well for approximately 4 years. Then 2-3 months ago, she noticed a small amount of pain in her back and significant pain when she is sexually active with her partner. The patient endorses leakage with coughing, laughing, sneezing, sex, walking, lifting and exercise.
